

Brackets
hygienically
packed!

The brackets go through a thorough cleaning process and are then hygienically packed in double-foiled blister packaging. This is done by robots in a fully-automated process.

The discovery® smart brackets are extremely well protected by the two layers of foil. You can be sure that the package containing your brackets is opened only for you. So your brackets are as hygienically clean as you and your dentist expect them to be!

Your
advantage

Double blister packaging for
top oral hygiene!

For my
very best
smile!

Straight, aesthetic teeth don't just give you a beautiful smile. They also have a positive effect on your general dental health, your pronunciation and the general harmony of your face.

My
choice

Smart design

discovery[®] smart is one of the smallest brackets in the world. discovery[®] smart brackets are flat, aesthetic and small ... so they are much less noticeable than standard brackets. They are also comfortable to wear because all edges and corners are rounded.

Smart production

discovery[®] smart brackets are manufactured in Germany using only materials of highest quality. Each patient receives their brackets in hygienically clean packaging.

For my
good health

discovery[®] smart brackets are made only with high-strength, surgical stainless steel. They are biocompatible and are particularly good for correcting tooth misalignments.

They also help you indirectly with oral hygiene since the rounded edges and the smooth surface of the brackets means they are easy to clean.
