

## Instructions for the preparation of Dentaurum bands.

These instructions apply to all Dentaurum bands that are approved for use on patients.

These instructions comply with the requirements of EN ISO 17664 : 2018 and RKI (Robert Koch Institute) guidelines.

# General requirements

If necessary, all bands should be cleaned, disinfected and sterilized. This also applies for initial use following delivery. As a general rule, bands are delivered non-sterile. Efficient cleaning and disinfecting is essential for effective sterilization.

During use ensure that contaminated bands are collected separately and are not replaced in the tray to avoid contamination of the loaded tray. Clean/sterilize the contaminated bands and place these back on the tray or sterilize the bands.

These instructions describe the initial preparation of bands as well as their preparation after they have been tried on a patient, but not fixed.

**It is not permissible to process (recycle) bands that have been fixed.**

## Manual preparation

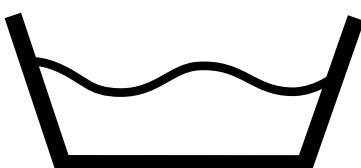

Surface contamination must be removed from bands immediately after use, at the latest within one hour.

Rinse the bands under running water and immerse in a disinfectant solution.

Use only a soft brush (nylon brush) or a clean soft cloth for manual removal of contamination.

Do not use metal brushes or steel wool.

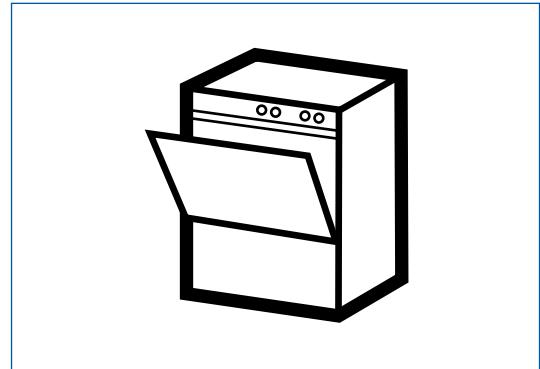

Disinfectants should be aldehyde-free (otherwise possibility of fixation of blood residue), have a certified effectiveness (e.g. DGHM [German Society for Hygiene and Microbiology] or FDA approval and CE marking), be suitable for disinfecting bands and be compatible with the bands.

## Mechanical cleaning and disinfection

### When using a disinfectant, make sure:

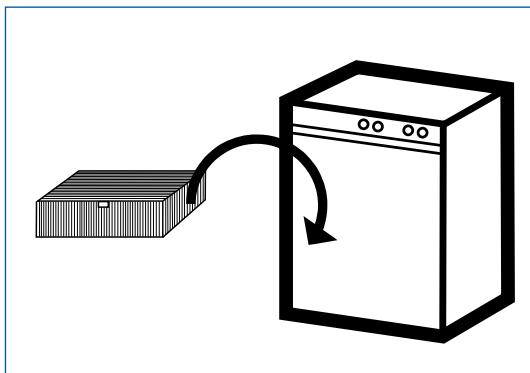

- the efficacy of the disinfectant has been certified (e.g. DGHM or FDA approved and CE marking according to DIN EN ISO 15883),
- a certified program for thermal disinfection (min. 5 mins at 90 °C / 194 °F or an  $A_0 > 3000$ ) is used (with chemical disinfection there is the risk of disinfectant residue on the bands),
- for rinsing, it uses only water that is sterile or has a low bacteria count (max. 10 bacteria / ml) and is low in endotoxins (max. 0.25 endotoxin units / ml) (e.g. purified water / highly purified water), and
- the air used for drying is filtered.

### When choosing a cleaning agent system, make sure:

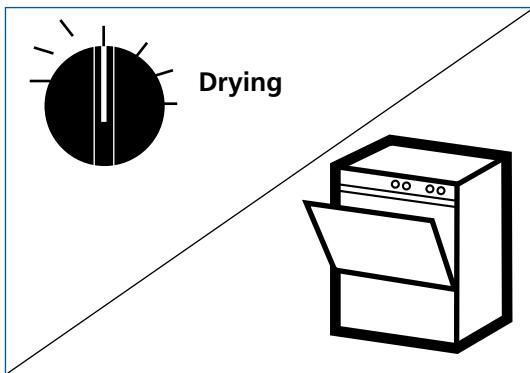

- it is suitable for cleaning metal bands,
- an additional disinfectant with certified efficacy (e.g. DGHM or FDA approved and CE marking) is used – provided that thermal sterilization is not used – and that it is compatible with the cleaning agent used, and
- the chemicals used are compatible with the bands (see chapter Material resistance).

**Adhere to the concentrations given by the manufacturer of the cleaning agent and disinfectant.**

### Procedure

- ① Place the bands on a suitable tray (closable sieve) into the disinfector.
- ② Start the program.
- ③ Remove the bands from the disinfector at the end of the program.
- ④ Check and pack the bands, immediately after removal if possible.
- ⑤ **If the disinfecter does not have an automatic drying program, leave the door of the unit slightly open to dry the bands.**

Proof of basic suitability for effective automatic cleaning and disinfecting was provided by an independent, accredited test laboratory using a G 7836 CD disinfecter (thermal disinfection, Miele & Cie. GmbH & Co., Gütersloh, Germany) and the cleaning agent neodisher® Medizym (Dr. Weigert GmbH & Co. KG, Hamburg). The procedure described above was taken into account during the tests.

## Manual cleaning and disinfection.

### When choosing a cleaning agent and disinfectant, please take note of the following:

- the bands must be suitable for cleaning and disinfecting.
- the cleaning agent must be suitable for ultrasonic cleaning.
- use only disinfectants with certified effectiveness (e.g. DGHM or FDA approval and CE marking). Disinfectants should be compatible with the cleaning agent used.

Do not use combined cleaning / disinfecting agents if possible. Combined cleaning / disinfecting agents can only be used if there is minimal contamination (no visible contamination).

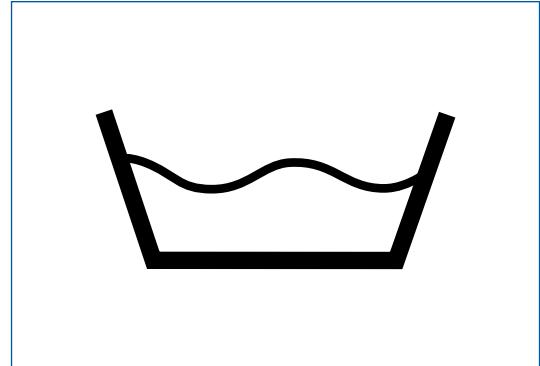

The concentrations and reaction times given by the cleaning agent and disinfectant manufacturer should be strictly adhered to. Use only freshly mixed solutions, only sterile or low-germ (max. 10 germs / ml) as well as low-endotoxin (max. 0.25 endotoxin units / ml) water (e.g. purified water / highly purified water) and only filtered air for drying.

## Cleaning procedure

- ① Place bands into the cleaning solution for the prescribed reaction time; ensure that they are adequately covered. If required use an ultrasonic cleaner or brush carefully with a soft brush. Rinse all hollow sections in the bands/welded parts using a single-use syringe (minimum volume 5 ml) before and after the reaction time.
- ② Remove the bands from the cleaning solution and rinse thoroughly with water.
- ③ **Check that the bands have been properly cleaned.**

## Disinfection procedure

- ① Immerse the bands fully in the disinfectant on a suitable tray for the recommended reaction time. Rinse all hollow sections in the bands using a single-use syringe (minimum volume 5 ml) before and after the reaction time.
- ② Remove the bands from the disinfectant solution and rinse thoroughly at least three times with water.
- ③ Do not pack the bands until they are dry. Pack the dry bands immediately.

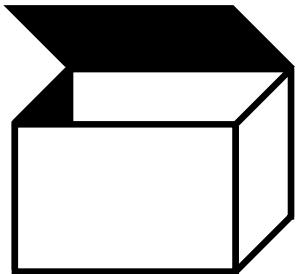

Proof of basic suitability for effective manual cleaning and disinfecting was provided by an independent, accredited test laboratory using Bodedex® forte cleaning agent and Korsolex® plus disinfectant (Bode Chemie, Hamburg, Germany). The procedure described above was taken into account during the tests.

## Check

Check all bands after cleaning or cleaning/disinfecting for corrosion, damage or contamination. Discard all damaged bands. Bands that are still contaminated must be cleaned and disinfected again.

## Packaging

**Wrap the bands or sterilization tray in disposable sterilization packaging (single or double wrap) and / or pack in sterilization containers that meet the following requirements:**

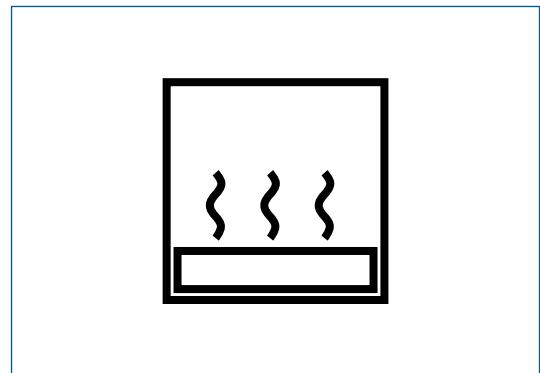

- DIN EN ISO/ANSI AAMI ISO 11607-1/2 (formerly: DIN EN 868/ANSI AAMI ISO 11607)
- suitable for steam sterilization (temperature resistant to min. 134 °C (273 °F), adequate steam permeability)
- adequate protection of the bands and sterilization packaging against mechanical damage
- regular servicing according to manufacturer's instructions (sterilization container)

## Sterilization

Only the following sterilization procedures should be used for sterilization. Other sterilization procedures are not suitable. Flash sterilization is not permitted. Do not use hot-air sterilization, X-ray sterilization, formaldehyde or ethylene oxide sterilization or plasma sterilization.

### Steam sterilization

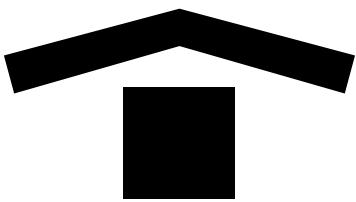

- fractional vacuum or gravitation process<sup>\*1</sup> (with adequate product drying)
- steam sterilizer in accordance with DIN EN 13060 or DIN EN 285
- validated in accordance with DIN EN ISO / ANSI AAMI ISO 17665 (formerly: DIN EN 554 / ANSI AAMI ISO 11134) (valid commissioning and product-specific performance evaluation)
- maximum sterilization temperature 134 °C / 273 °F (plus tolerance in accordance with DIN EN ISO / ANSI AAMI ISO 17665 (formerly: DIN EN 554 / ANSI AAMI ISO 11134))
- Sterilization time (exposure time at the sterilization temperature) min. 5 minutes at 134 °C/273 °F

Proof of basic suitability for effective steam sterilization was provided by an independent, accredited test laboratory using a EuroSelectomat steam sterilizer (MMM Münchener Medizin Mechanik GmbH, Planegg, Germany) and the vacuum process as well as a Systec V-150 steam sterilizer (Systec GmbH Labor-Systemtechnik, Wettenberg, Germany) and the gravitation process. The procedure described above has been taken into account during the tests.

<sup>\*1</sup> Use of the less effective gravitation process is only permitted if a fractional vacuum process is not available.

## Storage

Following sterilization, bands should be stored dry and dust-free in the sterilization packaging.

## Material resistance

**When choosing the cleaning agent and disinfectant ensure that they do not contain the following components:**

- organic, mineral or oxidizing acids (maximum permitted pH 9.5, neutral / enzymatic cleaner recommended)
- strong alkali solutions
- organic solvents (e.g. alcohols, ethers, ketones, benzines)
- oxidation agents (e.g. hydrogen peroxides)
- halogens (chlorine, iodine, bromine)
- aromatic / halogenated hydrocarbons
- salts of heavy metals

Do not clean bands with metal brushes or steel wool.

Do not expose bands and sterilization trays to temperatures above 134 °C/273 °F!

All bands can be prepared up to 5 times if this is done with due care and the bands are neither damaged nor contaminated. The operator bears responsibility for any further reuse or use of damaged and/or contaminated bands.

**This is valid only for bands that have been tried, but not fitted on a patient. It is not permissible to process (recycle) bands that have been fixed.**

# Overview bands

The overview contains all bands approved for use on patients. The preparation instructions given should be adhered to, unless directed otherwise. Further information is included at [www.dentaurum.com](http://www.dentaurum.com) and the Orthodontics catalog.

## dentaform® Snap / Assortments

- with super snap effect
- hard, stiff band quality
- anatomically shaped
- accurate fit
- ideal for the extra-oral techniques (facebow) or SUS
- safe retention and optimal bonding due to rough inner surface
- delivered in a tray (suitable for band cabinet REF 890-414-00)
- **McLaughlin-Bennett-Trevisi\* 18/22** available on request

We recommend using our dental vernier (REF 042-751-00) to determine the largest mesial-distal diameter of the tooth crown.

CE 0483

<sup>1)</sup>welded to buccal tube 818-131-20 and double hook 750-602-10.

<sup>2)</sup>welded to buccal tube 822-131-20 and double hook 750-602-10

\* The Dentaurum version of this prescription is not claimed to be a duplication of any other, nor does Dentaurum imply that it is endorsed in any way by Drs. McLaughlin, Bennett and Trevisi.

- with super snap effect
- hard, stiff band quality
- anatomically shaped
- accurate fit
- ideal for the extra-oral techniques (facebow) or SUS
- safe retention and optimal bonding due to rough inner surface
- **McLaughlin-Bennett-Trevisi\* 18/22** available on request

We recommend using our dental vernier (REF 042-751-00) to determine the largest mesial-distal diameter of the tooth crown.

CE 0483

<sup>1)</sup>welded to buccal tube 818-151-30 and double hook 750-602-10.

<sup>2)</sup>welded to buccal tube 822-151-30 and double hook 750-602-10.

\* The Dentaurum version of this prescription is not claimed to be a duplication of any other, nor does Dentaurum imply that it is endorsed in any way by Drs. McLaughlin, Bennett and Trevisi.

- easy adaptation
- slightly softer band quality (compared with dentaform® Snap)
- anatomically shaped
- accurate fit
- unwelded bands (with or without double hook) ideal for the Herbst technique (double band welding service available on request free of charge)
- safe retention and optimal bonding due to rough inner surface
- delivered in a tray (suitable for band cabinet REF 890-414-00)
- **McLaughlin-Bennett-Trevisi\* 18/22** available on request

We recommend using our dental vernier (REF 042-751-00) to determine the largest mesial-distal diameter of the tooth crown.

CE 0483

- easy adaptation
- slightly softer band quality (compared with dentaform® Snap)
- anatomically shaped
- accurate fit
- unwelded bands (with or without double hook) ideal for the Herbst technique (double band welding service available on request free of charge)
- safe retention and optimal bonding due to rough inner surface
- **McLaughlin-Bennett-Trevisi\*** 18/22 available on request

We recommend using our dental vernier (REF 042-751-00) to determine the largest mesial-distal diameter of the tooth crown.

<sup>1)</sup>welded to buccal tube 818-151-40 and double hook 750-602-10.

<sup>2)</sup>welded to buccal tube 822-151-40 and double hook 750-602-10.

\* The Dentaurum version of this prescription is not claimed to be a duplication of any other, nor does Dentaurum imply that it is endorsed in any way by Drs. McLaughlin, Bennett and Trevisi.

# dentaform® / Single packs

- easy adaptation
- slightly softer band quality (compared with dentaform® Snap)
- anatomically shaped
- accurate fit
- unwelded bands (with or without double hook) ideal for the Herbst technique (double band welding service available on request free of charge)
- safe retention and optimal bonding due to rough inner surface
- **McLaughlin-Bennett-Trevisi\* 18/22** available on request

We recommend using our dental vernier (REF 042-751-00) to determine the largest mesial-distal diameter of the tooth crown.

CE 0483

## • Standard bands / Assortments

- universally applicable for right and left
- unwelded bands (with or without double hook) ideal for the Herbst technique (double band welding service available on request free of charge)
- safe retention and optimal bonding due to rough inner surface
- delivered in a tray (suitable for band cabinet REF 890-414-00)
- **McLaughlin-Bennett-Trevisi\* 18/22** available on request

We recommend using our dental vernier (REF 042-751-00) to determine the largest mesial-distal diameter of the tooth crown.

\* The Dentaurum version of this prescription is not claimed to be a duplication of any other, nor does Dentaurum imply that it is endorsed in any way by Drs. McLaughlin, Bennett and Trevisi.

# Standard bands / Single packs

- universally applicable for right and left
- unwelded bands (with or without double hook) ideal for the Herbst technique (double band welding service available on request free of charge)
- safe retention and optimal bonding due to rough inner surface
- **McLaughlin-Bennett-Trevisi\* 18/22** available on request

We recommend using our dental vernier (REF 042-751-00) to determine the largest mesial-distal diameter of the tooth crown.
