

DENTAURUM  
QUALITY  
WORLDWIDE  
UNIQUE

We are proud of the fact that we have been writing dental history **for more than 130 years**. During this time, Dentaurum has progressed from being a dental laboratory to a globally operating dental company.

As an owner-managed family company in the fourth generation we work independently and flexibly from our location in Ispringen, Germany. We have always placed the highest demands on the quality of our products, from the purchase of raw materials to the packaged product.

"**Made in Germany**" has top priority for our research and development, for our production and our logistics. We place clear focus on Germany as our location, creating and maintaining jobs, and thereby contributing to securing a sound economic future.

dinamique®

The choice is yours!

Treatment with  
**dinamique® c** –  
aesthetic all round.

dinamique® c

dinamique® m

Choose between the ceramic bracket **dinamique® c** and the metal bracket **dinamique® m**.

# The best possible solution for me.

A fixed appliance consists mainly of an archwire and brackets that are bonded to the teeth. Forces work on the wire and the brackets to move the teeth into the position required.

## Standard:

In the case of standard brackets, the archwire is fixed in place on the bracket either with rubber rings or with thin wires, so-called ligatures.

## Self-ligating:

These ligatures are not needed for self-ligating brackets. In the middle of the bracket, there is a clip. This is a special kind of closure mechanism which holds the archwire in place. The archwire is placed into the open clip which is then gently closed ("ligating").

## dinamique® c – a choice for aesthetics.

The self-ligating ceramic bracket **dinamique® c** from Dentaurum offers you a solution that is almost invisible, highly effective and of top quality. The bracket design is finished to perfection by archwires in the same color as your teeth. The brackets are small, barely noticeable and work gently to correct your teeth.

There is a less expensive solution available; **dinamique® m** are small, self-ligating brackets made of metal. The archwire can be fitted easily into both **dinamique® c** and **dinamique® m** meaning you get to spend less time in the chair than if you had standard brackets.

## The advantages.

- You can barely see **dinamique® c** brackets in your mouth since the ceramic is coordinated to match the natural shade of teeth.
- You can choose to have white-coated wires that fit with the **dinamique® c** brackets. They don't get discolored and it's easy to change them.
- You have fewer check-ups because there are no ligatures that need renewing.
- The bracket is pleasant to wear since its surface is smooth and its edges are rounded.
- Changing the archwire is quicker and easier than for a standard bracket.
- It's important to keep the appliance clean. That's easy with **dinamique® c** because there are no ligatures which could get contaminated by food particles.

## The advantages.

- The smooth surfaces and the rounded edges of **dinamique® m** brackets mean they are more comfortable to wear.
- Changing the archwire is quicker and easier than for a standard bracket.
- You have fewer check-ups because there are no ligatures that need renewing.
- It's important to keep the appliance clean. That's easy with **dinamique® m** because there are no ligatures which could get contaminated by food particles.
