UNIQUE

Your practice team

We are proud of the fact that we have been writing dental history **for more than 130 years**. During this time, Dentaaurum has progressed from being a dental laboratory to a globally operating dental company.

As an owner-managed family company in the fourth generation we work independently and flexibly from our location in Ispringen, Germany. We have always placed the highest demands on the quality of our products, from the purchase of raw materials to the packaged product.

"Made in Germany" has top priority for our research and development, for our production and our logistics. We place clear focus on Germany as our location, creating and maintaining jobs, and thereby contributing to securing a sound economic future.

dinamique®

Treatment with
dinamique® m –
good all round.

The best possible solution for me.

A fixed appliance consists mainly of an archwire and brackets that are bonded to the teeth. Forces work on the wire and the brackets to move the teeth into the position required.

Standard:

In the case of standard brackets, the archwire is fixed in place on the bracket either with rubber rings or with thin wires, so-called ligatures.

Self-ligating:

These ligatures are not needed for self-ligating brackets. In the middle of the bracket, there is a clip. This is a special kind of closure mechanism which holds the archwire in place. The archwire is placed into the open clip which is then gently closed ("ligating").

dinamique® m – an excellent choice.

With their self-ligating **dinamique® m** brackets, Dentaureum is able to offer a solution that is attractive, fast and gentle. The design is small and perfectly coordinated so the brackets are comfortable to wear and barely noticeable.

The clip allows the wire to slide along the bracket which can mean that treatment with the fixed appliance is shortened. It is also easier to fix the archwire in the brackets.

So you get to spend less time on the chair than if you had standard brackets. **dinamique® m** uses lower forces to move your teeth so you'll find that treatment is gentler, so less uncomfortable.

The advantages.

- ☉ The smooth surfaces and the rounded edges of **dinamique® m** brackets mean they are more comfortable to wear.
- ☉ Changing the archwire is quicker and easier.
- ☉ You have fewer check-ups because there are no ligatures that need renewing.
- ☉ It's important to keep the appliance clean. That's easy with **dinamique® m** because there are no ligatures which could get contaminated by food particles.
