

Mini implants for your *quality of life.*
Security and stability for your dental prosthesis.

Say **YES** to your quality of life.

Speaking

Smiling

Eating

Stable prostheses give us an attractive smile and radiate good health so they are important for your quality of life. They also allow us to speak with family, friends and colleagues without inhibitions. Dental prostheses that fit properly enable you to bite easily into anything you like. They add to your vitality and enhance self-confidence – all without adhesive cream.

But they can have a detrimental effect on your quality of life if they don't fit properly. This makes it all the more important to find a lasting solution with the help of your dentist.

With CITO mini® implants from Dentaaurum you say a resounding YES to securely fitting prostheses. Quality and aesthetics for your SMILE.

Here's to your quality of life!

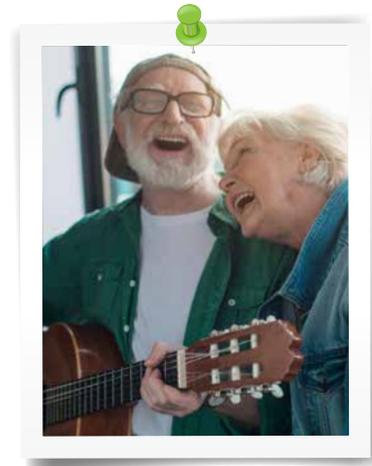

Your Dentaaurum Implants Team

CITO mini® – the right choice for you?

Security

Live life to the full

Do you have problems wearing your dental prosthesis?

Many people who wear a dental prosthesis are not happy with the fit or the retention. Maybe this is how you feel, too. Your prosthesis moves when you chew or speak. Pressure spots form on your gums and you experience inflammation.

Do you have difficulties chewing and speaking?

If the jaw bone has already receded, it becomes increasingly difficult to chew and to speak confidently. Your sense of taste may also be weakened. You experience more and more restrictions because of your loose dentures.

Has your appearance changed?

The jaw bone is stimulated by the roots of the teeth. If these are missing, the jaw bone slowly starts to recede. This then changes the natural shape of your face. The chin pushes forwards and the lips become thinner.

We have the solution for you.

Be inspired by what can be achieved with CITO mini® implants.

CITO mini® – what is that?

CITO mini® are small titanium pins reduced in diameter and especially designed for patients with low bone availability.

With titanium pins your total or partial prosthesis can be fixed securely and stabilized. They are the ideal solution for taking on the role of the roots that are missing. Chewing forces are transferred directly to the jaw bone so that the bone is preserved in the long-term.

Titanium pins are implanted in the jaw in a minor surgical procedure performed under local anaesthetic.

Advantages of mini implants:

- ✓ Improved ability to chew thanks to optimum retention of the prosthesis
- ✓ Preservation of the natural shape of the face
- ✓ No need to use adhesive cream
- ✓ Improved quality of life, greater feeling of security, boosted self-confidence
- ✓ Easy daily care and handling

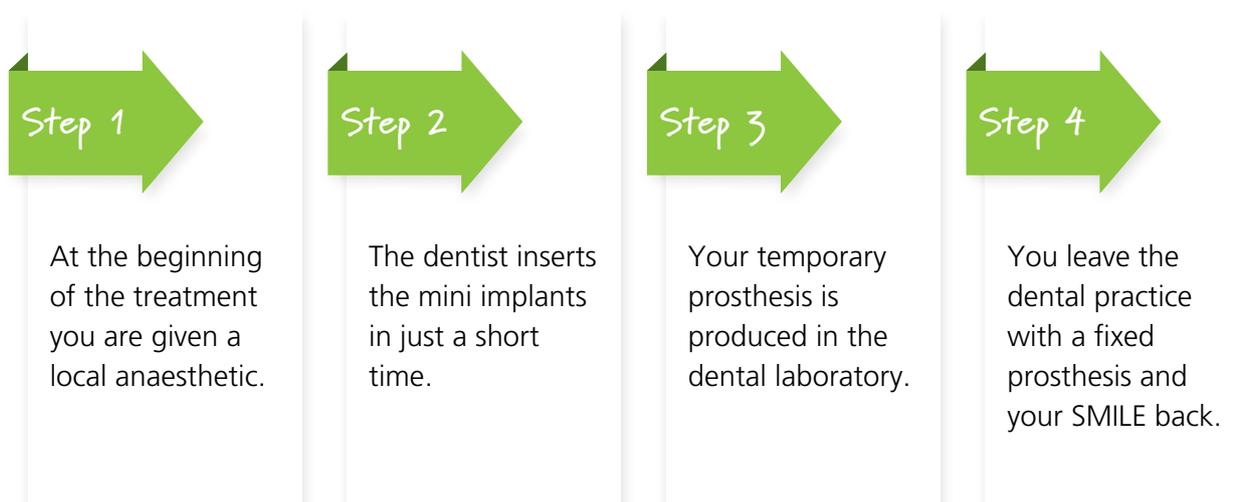

CITO mini[®] – how does it work?

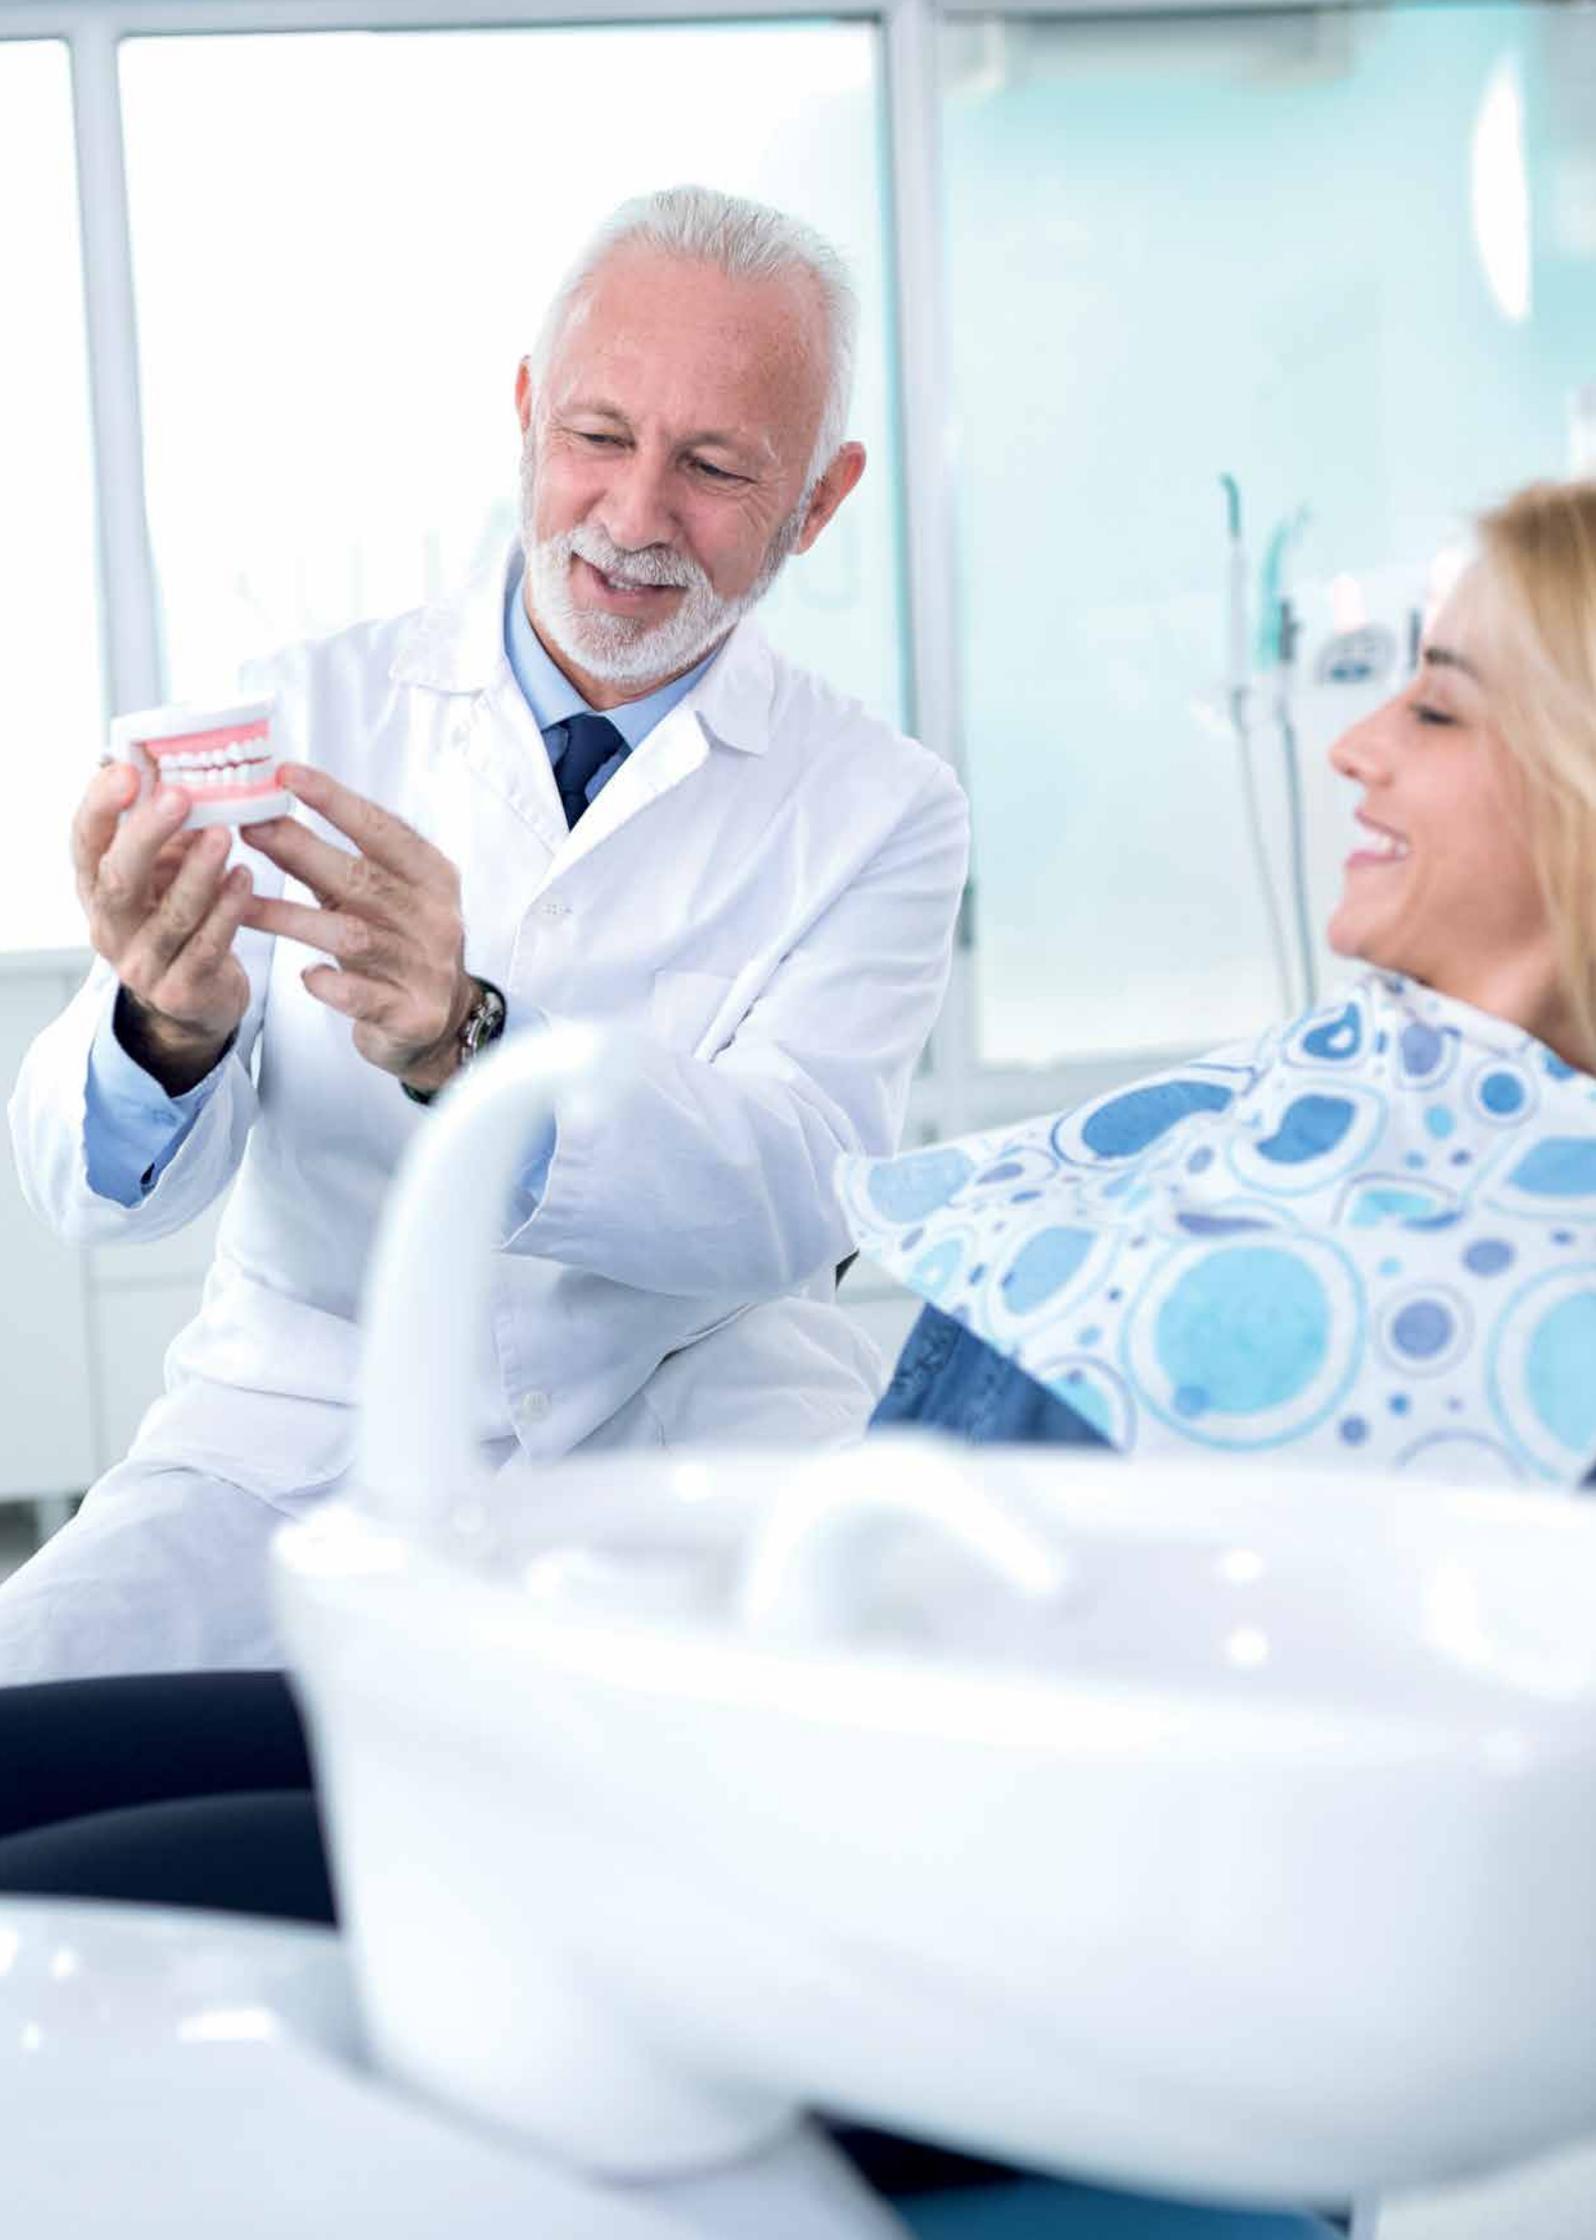

After a short healing phase the retention elements are simply attached to the mini implants and secured in the prosthesis. When you wear your prosthesis, you immediately sense that it is secure.

To achieve optimum stabilization of the prosthesis, 4 to 6 mini implants are generally implanted. The minimally invasive procedure and the avoidance generally of bone augmentation mean the patient is subjected to less stress.

CITO mini[®] – 4 steps to success.

CITO mini[®] – user satisfaction that speaks for itself.

Someone you trust, your dentist.

Despite their many advantages, the decision to opt for implants is not always easy. Remember that your dentist has a wealth of experience in this field and it's worth listening to his or her expert opinion. Your dentist can show you models and images to demonstrate what can be achieved nowadays to retain your quality of life and to get you SMILING again.

Your dentist also enjoys using CITO mini[®] implants. Read how pleased CITO mini[®] users are:

Jan Kielhorn,
Öhringen
(Germany)

“ Many patients consult my practice wanting implant rehabilitation without extensive surgery. In many cases I can offer them comparatively minor surgical intervention with mini implants. ”

Dr. Uwe
Friedrich,
Grumbach
(Germany)

“ The concept of mini implants has become a fixed part of my daily practice routine. The success rates stated in scientific literature are confirmed by the high level of patient satisfaction. ”

Dr. Bernd
Schwahn,
Greifswald
(Germany)

“ Mini implants are the optimum solution to stabilize an existing prosthesis. Generally the patient can bite firmly with his fixed prosthesis on the very day of the implantation. The patient's quality of life increases considerably. ”

Dr. Jan-Ove
Nissen,
Gietdorf
(Germany)

“ With CITO mini[®] implants the prosthesis is stabilized in the jaw – without complex surgery. Safe and simple! This is the ideal solution for patients to ensure a better quality of life. ”

CITO mini® – questions and answers.

Which prostheses can be secured with these titanium pins?

Generally speaking, any prosthesis can be secured with mini implants, whether it's one you already have or a new one. Ask your dentist for the best form of therapy for you.

Can I continue to use the prosthesis I already have?

If you already have dentures, it is quite possible that your dentist will be able to secure these with mini implants. Talk to your dentist who will help you find the best possible solution.

Is the procedure painful?

You will be given a local anaesthetic before the procedure. As the mini implants have a very small diameter, this is only a minor procedure. Usually you should not experience any pain during the treatment.

Can these titanium pins be implanted at any age?

Yes, they can be implanted in adults of any age.

How do these titanium pins differ from conventional dental implants?

Mini implants are about half as wide as their conventional counterparts. They are made of biocompatible titanium alloys and have a ball-head retaining element. They can therefore be fitted more quickly and the healing phase is shorter and less painful.

Are there cost advantages compared to conventional implants?

As mini implants are much smaller than conventional implants the treatment time is much shorter. Often one appointment for 1 to 2 hours is plenty. This means that the price can be up to 50 % less than with classic implants.

CITO mini® – quality made in Germany.

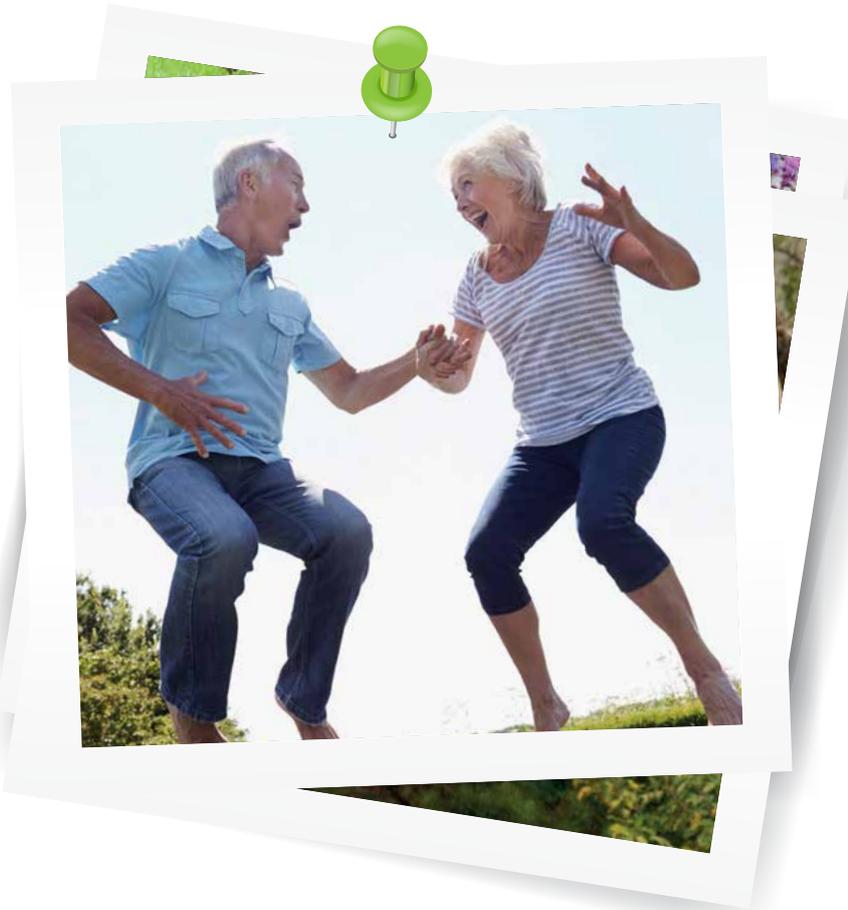

Quality from Germany.

Your dentist has chosen CITO mini® implants from Dentaaurum Implants for a good reason. Dentaaurum Implants is one of the few purely German dental implant manufacturers with over 20 years of experience and its own research and development and production in Germany. The family-led parent company, Dentaaurum, is based in Ispringen in the northern Black Forest.

Dentaaurum has some 500 employees and has been working in dental prosthetics and dentistry for more than 130 years. The company is active worldwide. With this experience they can offer unparalleled, high quality premium products through your dental practice.
