

tomas®

... for a beautiful smile.

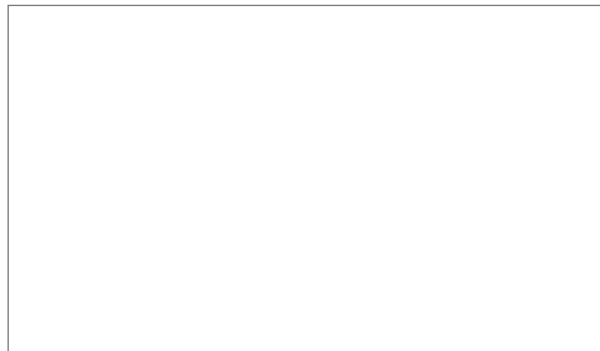

tomas® – many advantages.

- ⇒ No headgear required
- ⇒ Extraction of healthy teeth usually not necessary
- ⇒ Invisible and comfortable to wear
- ⇒ Quick treatment results and shorter treatment times generally
- ⇒ No speech impediments
- ⇒ Made in Germany – tested and safe

Your dental practice team

tomas®
temporary orthodontic micro anchorage system

Invisible tooth correction ...

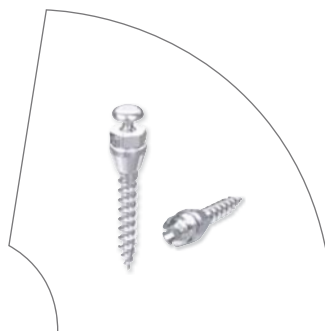

Easy. Fast.
Comfortable.

Initial condition: crowding.

Relieve crowding – make space.

In the course of orthodontic treatment, it is often necessary to create space in order to correct crowding. Crowding is not only an aesthetic problem, it can also cause problems with chewing and with speech.

Patient-friendly therapy alternative.

Invisible, fast therapy.

tomas® is a genuine alternative to headgear and tooth extraction.

The tomas® system consists of so-called mini-pins and accessories which the orthodontist uses to make the appliance. Inserting the pins into the jaw and removing them after treatment is generally unproblematic and quick.

Conventional therapy.

Crowding is often treated by extracting healthy teeth. Alternatively, you might be given some kind of headgear or a face mask.

- Wearing headgear is uncomfortable, unsightly and time-consuming
- And if you don't wear the headgear, treatment is ineffective

Effective day and night.

Since the tomas®-pins are inserted into the jaw, the appliance is effective 24 hours a day. This often reduces the time needed for the treatment to be successful – without you having to do anything! And of course you don't have to remember to use the appliance. The pin doesn't get in the way when you're eating or doing sport – unlike headgear which you would have to remove.

The tomas® system can simplify your path to a better smile!
