

*The pathway
to your
new smile*

” passion and precision:
because we love teeth!

- 1 Talk to your doctor about possible treatment for you with the prime4me® Aligner system.
- 2 The intra-oral scans or impressions of your upper and lower jaws provide a precise basis for the planning and production of the aligners.
- 3 A special software is used to plan your treatment. The aligners are then individually manufactured for your teeth.
- 4 Treatment progress is regularly monitored in the dental practice.

Your practice team

Because we love teeth!

Transparent aligner therapy for
almost invisible treatment

989-803-50 Printed by DentaURUM Germany 2023-02

Concept

The entire course of treatment consists of transparent aligners which gently move the teeth in the direction required.

There are soft aligners (0.6 mm thick) and hard aligners (0.8 mm thick), each worn alternately for one week (7 days).

Advantages

- Extremely comfortable to wear
- Innovative, modern system with 2 aligners
- Does not disturb in everyday life (speaking, sports etc.)
- Invisible and inconspicuous
- Simple and straightforward
- Short period of treatment
- Simpler oral hygiene compared to brackets
- Great performance gives best value for money
- Dental insurance may reimburse costs
